FLANGE FACING FINISHES FACE PREPARATION

STOCK FINISH:
The most widely used of any gasket finish, because practically, is suitable for all ordinary service conditions. This is a continuous spiral groove. Flanges size 12" (304.8mm) and smaller, are produced with a 1/16" round–nosed tool. For size 14" (355.6mm) and larger, the finish is made with 1/8" round–nosed tool.

SPIRAL SERRATED OR PHONOGRAPHIC:
This finish is produced by using a 90° round–nosed tool.

CONCENTRIC SERRATED:
This finish a produced by using a 90° round–nosed tool.

SMOOTH FINISH:
The cutting tool employed shall have an approximate 0.06" radius.
The resultant surface finish shall have a 125 μ inch to 250 μ inch.(ANSI B 16.5 para 6.4.5)
1.RAISED FACE, AND LARGE MALE AND FEMALE
Either a serrated–concentric or serrated–spiral finish having from 45 to 55 grooves per inch is used. (1.8 to 2.2 grooves per mm) the cutting tool employed has an approximate 0.06 inch radius. The resultant surface finish shall have a 12.5 μ inch (3.2 μ m) to 250 μ inch (6.4 μ m) approximate roughness.
2.TONGUE AND GROOVE, AND SMALL MALE AND FEMALE
The gasket contact surface does not exceed 125 μ inch (3.2 μ m) roughness.
3.RING JOINT
The inside wall surface of gaset groove does not exceed 63 μ inch (1.6 μ m) roughness.
4.BLIND
Blind flanges need not be faced in the center if when this center part is raised, its diameter is at least 1 inch smaller than the inside diameter of fittings of corresponding pressure class. When the center part is depressed, it's diameter is not greater than the inside diameter of the corresponding pressure class fitting. machining of the depressed center is not required.

GRNERAL COMMENTS:

- All pressure are in pounds as per square inch, gaga (psig)
- See temperature notes for service limitations.
- Plate materials are listed only for use as blind flange. Additional plate materials listed in ANSI B16.34 may also be used with corresponding B 16.34 standard class rating.
- ASME boiler and pressure vessel code, section ll materials which also meet the requirements of the listed ASTM specification may be used.

This diagram illustrates the arrangement but not necessarily the correct number of bolt holes.

Refer to the column "Bolting Number" in Table 16 for the actual number.

NOTE 1 Dimensions N1,N2 and N3 are measured at the intersection of the hub draft angle and the back face of the flange.

NOTE 3 For dimensions Gmax refer to NOTE 1 of 5.6.1.
